Description			
<p>I report this not so serious bug for documentation only (it could eventually puzzle some beginner). As trivial as it seems patching it probably involves tweaking the lexical analyser, quite not a really exciting thing to do.</p> <p>type Yell : woow.</p> <p>If no newline (end of file just following the dot) then i get this error:</p> <p>(line 1, column 18) Error E111: Premature end of file within a paragraph.</p>

This is because the dot alone is not the same token as a dot followed by a space (or newline). This 'feature' has been added so as to allow the recognition of the end of a paragraph by [[PyramIDE]] (for syntactic coloring). But actually, I'm not sure it's still needed, because [[PyramIDE]] has a complete syntactic analyser.

This is also why in the dot notation 'a.f' 'f' must immediately follow the dot. The dot followed by a space is not an operator.

No definitive decision has been taken.
